

Everyone likes options – Introducing the new Hybrid Preference Pack™

Now you can combine both reusable and disposable products into a customized procedure pack program, plus benefit from daily delivery and retrieval service.

The opportunity to configure your procedure pack solution with reusable and disposable products is now available in the new Hybrid Preference Pack™ from SRI Surgical and Cardinal Health.

If your hospital is interested in reusable products, the Hybrid Preference Pack™ may be a great option for you. The reusable products available from SRI Surgical include sterile surgical gowns, towels, back table and mayo covers, and basins. These reusable components are combined with Presource® procedure packs, which contain the core disposable items needed for your surgical procedures. Through an extensive portfolio, experienced team and proven process, Presource® tailors supply chain management solutions to your needs.

The Hybrid Preference Pack™

Waste reduction begins by selecting and purchasing reusable products as well as ensuring your procedure pack program is customized to your clinical requirements. SRI Surgical and Presource® are committed to helping you with your green initiatives by providing environmentally preferred purchasing options that maximize value and minimize waste.

Together, we can tailor a solution that's right for you.

Benefits of the Hybrid Preference Pack™ Program:

- Drives productivity, safety and cost containment
- Reduces packaging and medical waste
- Saves water and energy consumption
- Reduces chemical usage
- Provides just-in-time delivery and daily retrieval service

Our commitment to the environment

Did you know healthcare facilities consume more energy per square foot than any other industry? It's true. The U.S. healthcare industry is a significant user of land space and a large generator of waste. That's why we're dedicated to greening our companies as well as helping you green yours.

SRI Surgical's design for reprocessing of surgical linen is based upon an environmentally friendly architecture that is structured to ensure a sustainable outcome over the years. We take into consideration the importance of:

- efficient water management
- energy saving strategies
- environmentally friendly chemicals
- a sterilization approach which continues to be the gold standard, and is the least harmful to humans and the environment

The SRI Surgical facilities adhere to the standards of an FDA regulated medical device manufacturing environment.

Presource® Products and Services helps customers alleviate the strain on the environment through customized procedure pack

programs. The Presource® process begins with an assessment of your current clinical practice and component usage. Based on the information gathered, our pack program specialists and clinicians work with you to ensure your packs contain exactly what you need and nothing more.

Proper preference card management is also critical to managing waste. Proper preference card management reduces:

- the number of opened and not used items
- the amount of returns
- overall waste
- the amount of reprocessing

Ask your Presource® sales representative about this program and how we can help you better manage your preference card system.

With SRI Surgical as a channel partner with Cardinal Health, you can be assured that your supply chain management solutions will be tailored to meet your unique needs.

Contact your SRI Surgical or Presource® sales representative to learn more.
